The invention relates to novel immunogenic CDG oligodeoxynucleotides (AACG0591-C073). The Oligonuclectide are at least 10 bases long and comprise one of the generic sequences 5-NNNT-CDG-WNNA-3 or 5'-RY-CDG-RY 3'. The central CDG motif is unmethylated, and the oligonucleotides optionally have phosphorothioate linkages which make them more resistant to degradation. The invention also relates to an oligonucleotide delivery comprising an oligonucleotide of the invention and a targetting agent, and a pharmaceutical composition comprising the oligonucleotide delivery complex. The oligonucleotides of the invention and a targetting agent, and apharmaceutical composition comprising the oligonucleotide delivery complex. The oligonucleotides are able to induce either a cell-mediated response or a humoral [B-cell, antibody) response, with oligonucleotides of the sequence 5'-RY-CDG-RY-3' being able to induce a humoral tesponse. It is thought that after administration, the oligonucleotide acts on antigen presenting cells deliging to activation of natural killer (NK) cells. A cell-mediated or induction of antimer response is useful for treating, preventing or an immune response is useful for treating, preventing or an induction of natural killer (NK) cells. A cell-mediated or induction of an immune response is useful for a conditions, and the infections which may be treated include ezema, allergic conditions which may be treated include ezema, allergic conditions which may be treated include selection. Conditions, and the infections which may be treated include selection in conditions, and the infections which may be treated include selection. Conditions, and the infections which may be treated include ezema, allergic conditions which may be treated i Claim 4; Page 30; 46pp; English.

The invention relates to novel immunogenic CgG oligodecxymulocitoridases (AAC80581-C80723). The oligomucleotide are at least 10 bases long and comprise one of the generic sequences 5'-NNNT-CgG-WNNN-3' or 5'-RY-CgG-RY optionally have phosphorothicate linkages which make them more resistant to degradation. The invention also relates to an oligomucleotide delivery complex comprising an oligomucleotide of the invention and a targetting complex comprising an oligomucleotide of the invention and a targetting agent, and a pharmaceutical composition comprising the oligomucleotide of delivery complex. The oligomucleotides are able to induce either a cell-complex complex. The oligomucleotides are able to induce either a cell-complex complex and those of the sequence 5'-RY-CpG-RY-3' being able to induce a humoral response. It is thought that after a coll-mediated Trechl) response. It is thought that after a deministration, the oligomucleotide acts on antigen-presenting cells administration, the oligomucleotide acts on antigen-presenting cells (e.g., macrophages and dendritic cells), which then release cytokines, leading to activation of natural killer (NK) cells. A cell-mediated or humoral response can then occur by activation of T- or B-cells. The induction of an immunogenic CpG oligomucleotide is administrated either alone or combination with an anti-allergenic agent or anti-infection, where an immunogenic CpG oligomucleotide is administrated either alone or combinations, and the infections which may be treated include eczema, allergic conditions which may be treated include eczema, allergic erythematosus, rheumatoid arthritis and enhinement of an autoimmune disorder (e.g., lumburo ec Novel oligonucleotides useful for the prevention and treatment of allergies, cancer, and autoimmune disorders and for ameliorating symptoms The invention relates to novel immunogenic CpG oligodeoxynucleotides allergies, cancer, and autoimmune disorders and resulting from exposure to a bio-warfare agent. The invention describes a vaccine comprising one or more epitopes of a Paramyxoviridae F protein, and one or more CpG (cytosine followed by guanine linked by phosphare bond)-oligodideoxynucleotides (DNBs). The vaccine is useful for vaccinating a patient especially against viruses of the Paramyxoviridae family e.g. respiratory syncytial virus (RsV), the primary cause of viral bronchiolitis and pneumonia in infants and particularly implicated in death of infants that as been particularly implicated in death of infants that are premature, have bronchopulmonary dysplasia, or congenital heart conditions. This sequence represents an oligodideoxynucleotide that can be used in the creation of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CpG oligodeoxynuclectide; dendritic cell; tumour; immunotherapy; vaccine; cytostatic; immunostimulant; gene therapy; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention describes a vaccine comprising one or more epitopes of a Paramyxoviridae F protein, and one or more CpG (cytosine followed by guanine linked by phosphate bond)-oligodideoxynaclectides (DNBs). The vaccine is useful for vaccinating a patient especially against viruses of the Paramyxoviridae family e.g. respiratory synoytial virus (RsV), the primary cause of viral bronchiolitis and pneumonia in infants and children, and infectious pulmonary disease in infants. RsV has been particularly implicated in death of infants that are premature, have bronchopulmonary dysplasia, or congenital heart conditions. This sequence represents an oligodideoxynucleotide that can be used in the creation of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Vaccine for immunizing patient against respiratory syncytial virus, has epicopes of Paramyxoviridae F protein, and cytosine followed by guanine linked by phosphate bond-oligodideoxynucleotides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

                                                                                                                                                                                                                                          The present sequence is that of CpG oligodeoxynucleotide DV32 of the invention. A claimed method for generating dendritic cells involves contacting a dendritic cell precursor, especially a monocyte, with a D type oligodeoxynucleotide (see ACC48294) containing a central unmethylated CpG motif. The method is useful for generating mature dendritic cells and enhancing T cell responses, thus enhancing antigen presentation. Mature dendritic cells are useful for tumour immunotherapy, for augmenting an immune response to an infectious agent or to a vaccine, and as vaccines to prevent future infection or to activate the immune system to treat diseases such as cancer. Mature dendritic cells may also

The invention relates to sterically stabilised cationic liposomes (SSCL)
which comprises a cationic lipid, a co-lipid, stabilising agent and
conceptuating a K type oligodeoxynucleotide (ODN) including a CpG motif.
The invention is useful in pharmaceutical composition for impairing
crowth of a solid tumour cell (e.g. human tumour cell) bearing an
interleukin-13 receptor in a subject; for stimulating an immune response,
which is expression of a cytokine (e.g. interferon gamma), particularly
immunotherapeutic response against tumours or stimulating an invito immune edil, and for inducing an immune response against an
infectious agent e.g. virus, bacteria and fungus. It is also useful for
delivering oligodeoxynucleotides including a CpG motif in clinical
applications; for treating infectious diseases (e.g. tularemia, malaria,
cancinications; for treating infectious diseases (e.g. tularemia,
applications; for treating infectious diseases (e.g. tularemia,
cetc); allergy (e.g. eczema, allergic rhinitis or coryza, hay fever,
bronchial or allergic asthma, urticaria, food allergies), autoimmune
diseases (e.g. diabetes, rheumatoid arthritis, lupus erythematosus and
multiple solerosis) and psoriasis. The present sequence is a D class CpG
multiple solerosis)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                including a CpG motif in clinical applications, comprises a cationic
lipid, a co-lipid, stabilizing agent and an encapsulated oligonucleotide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 vascular endothelial growth factor; VEGF; CpG oligonucleotide;

allergies, cancer, and autolmmume ursolvers and resulting from exposure to a bio-warfare agent.

Claim 4; Page 36; 46pp; English.

```
The present invention describes a method for inducing the production of vascular endothelial growth factor (VEGF) by a cell comprising contacting the call with a CpG oligonucleotide and therefore inducing the production of twe cell. Also described: (1) inducing neovascularisation in a tissue where the formation of new blood vessels is desired, and so inducing neovascularisation in the area of the tissue; (2) promoting angiogenesis in an area of the subject where angiogenesis is and so comprising introducing a CpG oligonucleotide to the area, and so promoting angiogenesis in the subject; and (3) screening for an agent that inhibits neovascularisation, comprising administering a CpG oligonucleotide to a non-human mammal and administering a CpG oligonucleotide to a non-human mammal and administering the agent to the agent is effective in inhibition of angiogenesis in the enimal indicates that the agent is effective in inhibiting neovascularisation. The CpG oligonucleotides can be used in gene therapy. The method and the CpG oligonucleotides can be used in inducing angiogenesis or neovascularisation, such as in subjects with a skin graft, subjects who exhibit male pattern baldness, or subjects who have a wound or who have atherestlesselves in this in every angiogenesis or cathering cfor agents that inhibit neovascularisation. The persent sequence

The invention relates to novel immunogenic CpG oligodeoxynucleotides (AAC80581-C80723). The oligonucleotide are at least 10 bases long and comprise one of the generic sequences 5.*NBNT-CpG WNNA-3. or 5.*R2-CpG *-3.*The central CpG motif is unmethylated, and the oligonucleotides optionally have phosphorothioate linkages winto make them more resistant to degradation. The invention also relates to an oligonucleotide delivery complex or an oligonucleotide of the invention and a targetting agent, and a pharmaceutical composition comprising the oligonucleotide delivery complex. The oligonucleotides are able to induce either a cellmediated (T-cell) response or a humoral (B-cell, antibody) response, with oligonucleotides of the sequence 5.*RY-CpG*Ry-3' being able to induce a humoral tesponse. It is thought that after a definition of the sequence 5.*RY-CpG*Ry-3' being able to induce a humoral tesponse. It is thought that addition and dendritic cells) which then release cytokines, leading to activation of natural killer (NK) cells. A cell-mediated or humoral response can then occur by activation of *- or B-cells. The induction of an immune response is useful for treating, preventing or amelocating an altergic reaction (preferably asthma) or an infection, where an immunogenic CpG oligonicleotide is administered either alone or in combination with an anti-lalergenic agent or anti-infections agent. The induction may also be captured in the treatment of an autoimmune disorder (e.g., lupus conditions, and the infections which may be treated include viral, conditions, and the infections which may be treated include viral, capture to an agent of an autoimmune disorder (e.g., lupus capture to an agent of an autoimmune disorder (e.g., lupus capture) and schistosomiasis. Immune response induction may also be associated with immune system deficiency, and symptoms resulting for a vaccine. The oligonucleotide is preferably administered to the host. The present sequence represents an immunogenic CpG oligonecential processes in the pre
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö

Novel oligonucleotides useful for the prevention and treatment of allergies, cancer, and autoimmune disorders and for ameliorating symptoms resulting from exposure to a bio-warfare agent.

Claim 4; Page 36; 46pp; English.

The invention relates to novel immunogenic CpG oligodecoxynucleotides (AAC80581-C80723). The oligonucleotide are at least 10 bases long and comprise one of the generic sequences 5'-NNNT-CpG-WNNN-3' or 5'-RY-CpG-RY -3'. The central CpG motif is unmethylated, and the oligonucleotides optionally have phosphorothioate linkages which make them more resistant to degradation. The invention also relates to an oligonucleotide delivery complex comprising an oligonucleotide of the invention and a targetting agent, and a pharmaceutical composition comprising the oligonucleotide delivery complex. The oligonucleotides are able to induce either a cellmediated (T-cell) response or a humoral (B-cell, antibody) response, with oligonucleotides of the sequence 5'-RY-CpG-RY-3' being able to induce a cell-mediated response, and those of the sequence 5'-NNNT-CpG-WNNN-3' cell-mediated response, and those of the sequence 5'-NNNT-CpG-WNNN-3' cell-mediated response, and those of the sequence 5'-NNNT-CpG-WNNN-3' cell-mediated or induce a humoral response. It is thought that after caministration, the oligonucleotide acts on antigen-presenting cells (e.g., macrophages and dendritic cells), which then release cytokines, communistration of natural killer (NK) cells. A cell-mediated or humoral response can then occur by activation of T or B-cells The induction of an immune response is useful for treating, preventing or ameliorating an allergic reaction (preferably asthms), or an infection, where an immunogenic CpG oligonucleotide is administered either atone or in combination with an anti-largenic agent or anti-infections and the infections which may be treated include viral, bacterial, fungal and protozoal infections such as tuberculosis, AlDS, conditions, and the infections which may be treated include viral, bacterial, imman and exhibited manual esegons in elegance induction may also be cused in the treatment of an autoimmune disporder (e.g., lupus errothers and achieves and delications with immune system deficiency, and symptom and achieve oligonuclectide, either alone or in combination with an anti-cancer agent, is useful for treating solid tumour cancer. The induction of an immune response is used in antisense therapy and to improve the efficacy of a vaccine. The oligonuclectide is preferably administered to lymphocytes ex vivo, producing activated lymphocytes which are then administered to the host. The present sequence represents an immunogenic CPG oligodeoxynuclectide of the invention exposure to an agent of biological warfare. An immunogenic CpG

humoral response can then occur by activation of T- or B-cells. The induction of an immune response is useful for treating, preventing or ameliorating an allergic reaction (preferably asthma), or an infection, where an immunogenic CpG oligomoleotide is administered either alone or in combination with an anti-allergenic agent or anti-infectious agent. The allergic conditions which may be treated include eczema, allergic rhinitis, hayfever, utricaria, food allergies and other atopic conditions, and the infections which may be treated include viral, barterial, fungal and protozoal infections such as tuberculosis, ADB, bacterial, fungal and protozoal infections with a tuberculosis, ADB, cleishmania and schistosomiasis. Immune response induction may also be used in the treatment of an autoimmune disorder (e.g., lupus erychematosus, rheumanatoid arthritis and multiple sclerosis), a disease associated with immune system deficiency, and symptoms resulting from exposure to an agent of biological warfare. An immunogenic CpG oligonucleotide, either alone or in combination with an anti-cancer of agent, is useful for treating solid tumour cancer. The induction of an immuno service is a vaccine. The oligonucleotide is preferably administered to lymphocytes ex vivo, producing activated lymphocytes which are then administered to the host. The present sequence represents an immunogenic CpG cpG oligodeoxymucleotide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CpG sequence; immune response; non-B cell activation; interferon gamma; IFN-gamma; humoral; antibody production; interleukin-6 production; herapeutic; altergy; asthma; cancer; autcimmune disorder; infection; bio-warfare, vaccine; antisense therapy; eczema; allergic rhinitis; coryza; hay fever; urticaria; hives; food allergy; atopic condition; hupus erythematosus; rheumatoid arthritis; multiple sclerosis; schistosomiaais; tuberculosis; acquired immunodeficiency syndrome; AlDS; Leishmania; Ebola; Anthrax; Listeria; ss.

sednences

```
nucleotides comprising multiple CDG sequences, where one of the CDG sequences is different from another of the multiple CDG sequences. The sequences is different from another of the multiple CDG sequences. The conversal for inducing an immune response, preferably a cell-conversal involving an immune response, interferon gamma (IFW-gamma) production or a humoral immune response involving B cell activation, antibody and interleukin-6 production in a host, for treating, preventing or ameliorating an allergic reaction, e.g. asthma. Concer, e.g. solid tumour cancer, a disease associated with the immune cancer, e.g. solid tumour cancer or an immune system deficiency, infection or a symptom resulting from exposure to bio-warfare agent in a human. CC system cancel improves the efficacy of a vaccine and is induction of immune response improves the efficacy of a vaccine and is corpara, hay fever, bronchial asthma, urticaria (hives), food allergies and other atopic conditions, for improving the efficacy of vaccines coryza, hay fever, bronchial asthma, urticaria (hives), food allergies and other atopic conditions, for improving the efficacy of vaccines cand other atopic conditions, for improving the efficacy of vaccines and anther atopic and immune system deficiencies, e.g. lupus carther the administration or malaria, for treating immune system deficiencies, e.g. lupus

Oligodeoxynucleotides for inducing an immune response to treat and prevent an allergic reaction, cancer, an autoimmune disorder and symptoms resulting from exposure to bio-warfare agents, comprise multiple CpG ведпенсев

Claim 5; Page 40; 48pp; English

AASO9551-AASO9662 represent oligodeoxynucleotides (ODN) of at least 10 nucleotides comprising multiple CpG sequences, where one of the CpG sequences is different from another of the multiple CpG sequence. The converse is different from another of the multiple CpG sequence. The CoDN are useful for inducing an immune response, preferably a cell. mediated immune response, involving non-B cell activation, interferon converse in a nuclear of interferon an elibody and interleukin-6 production in a host, for treating, preventing or ameliorating an allergic reaction, e.g. asthma, cancer, e.g. solid tumour cancer, a disease associated with the immune system e.g. autoimmune disorder or an immune system deficiency, infection or a symptom resulting from exposure to bio-warfare agent in a human. The system e.g. autoimmune disorder or an immune system deficiency, infection or a symptom resulting from exposure to bio-warfare agent in a human. The constant of immune response improves the efficacy of a vaccine and is used in antisense therapy. The ODN are useful for treating or amoliorating allergic reactions, including eczema, allergic rhinitis or coryza, hay fever, bronchial asthma, urticaria (hives), food allergies and other atopic conditions, for improving the efficacy of vaccines against hepatitis A, B and C, human immunodeficiency virus (HIV) and malaria, for treating immune system deficiency virus (HIV) and cancer the efficacy of exputement of seases such as rheumarcoid arthritis and cultiple sclerosis, infections including Prancisela, including Ebola, human and allergic of bio-warfare agent, including Ebola, human and allergic of bio-warfare agent, including Ebola,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Submitted (25-APR-2002) Maize Mapping Project, University of Submitted (25-APR-2002) Maize Mapping Project, University of Missouri, Columbia, MO 65211, USA If you are interested in getting corresponding physical clones, these are publicly available from ZmDB and may be found by BLAST searching at MSL, maizemap.org; ZmDB, www.zmdb.iastate.edu; TIGR, www.tigr.org; or NCBI, www.ncbi.nlm.nih.gov. When the source of the maize cDNA sequences is either Virginia Walbot, Stanford or Pat Schnable, Iowa State, then clones may be requested from ZmDB: www.zmdb.iastate.edu.
site 'www.zmdb.iastate.edu' and follow the links for 'RescueMu.' Grid M was grown at University of Arizona in 2001. DNA was extracted from leaf punches, double digested using BamHI and BglII, and ligated to form circular plasmids. DH10B cells were transformed and then screened on LB plates with ampicillin."

                                                                                                                                                                                                                                                        increa" Vector: pUC19; Site_1: ECORI; Site_2: ECORI; The library was prepared by George Rudenko using, poly (A) selected RNA and Universal Riboclone CDNA Synthesis System (Promega, CDNA was synthesized using both random and oligo (dT) primers in separate reactions and equipped with ECORI adaptors. Library was size-fractionated on agarose gels (for insert size >400bp) and non-directionally cloned into ECORI-dispersed pUC19 vector. Blue/white selection on carbenicillin-containing plates was used to recover

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 3, A

Patent No. 6551735

GENERAL INFORMATION:
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS
TITLE OF INVENTION: AERGIGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: NUMBER: US/09/252,991A
CURRENT APPLICATION NUMBER: US 60/074,788
PRIOR APPLICATION NUMBER: US 60/074,788
PRIOR APPLICATION NUMBER: US 60/094,190
PRIOR PILING DATE: 1998-02-18
                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 1

Submitted (19-NOV-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

On Nov 19, 2002 this sequence version replaced gi:23815605.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the fature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold'). Within each contig-scaffold') with sequence may extend beyond the ends of the clone and there may be sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome table.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        * NOTE: Estimated insert size may differ from sequence length

* (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).

* NOTE: This is a 'working draft' sequence. It currently

* consists of 1 contigs. Gaps between the contigs

* are represented as runs of N. The order of the pieces

* is believed to be correct as given, however the sizes

* of the gaps between them are based on estimates that have

* provided by the submittor.

* This sequence will be replaced

* by the finished sequence as soon as it is available and

* the accession number will be preserved.

* Location/Qualifiers

I 128789: contig of 128789 bp in length.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 * NOTE: This is a 'working draft' sequence. It currently consists of 4 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as "runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ;
